[CYLTEC] in 7 dates

Since 2004, Cyltec is a member of the **UNM 61 committee**, Whose missions is to work on furniture standards for the storage of hazardous products in partnership with all other European manufacturers.

Cyltec is at the heart of standards and innovations
The design of our products meets the needs of safety, user convenience and respect for our environment.

In 2015, Cyltec initiated a certified quality process.
Since 2016, the company is certified ISO 9001 V2015. This reflects our ongoing commitment to the quality of our products, services and the relationship with our customers and partners.

Louis Launay, founder of Cyltec, is now an Honorary member and administrator of Fabrilabo, a trade association of laboratory equipment manufacturers and traders. Today, Cyltec is committed to the 2 professional syndicates to share its experience and support the growth of our market.

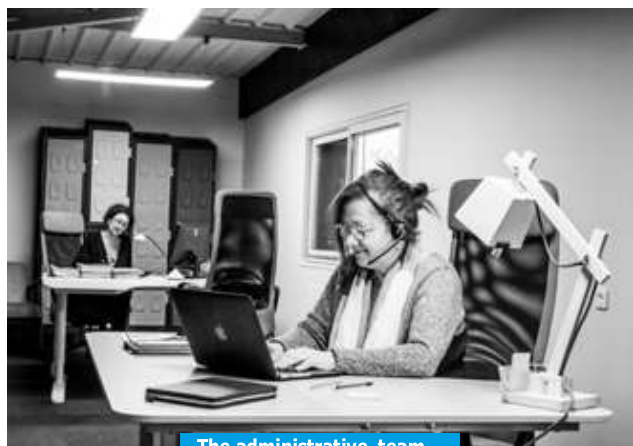

OUR DNA

Cyltec was created in 1989 by Louis Launay after an experience in the security of goods and people (APAVE controls, access controls, safes and fireproof cabinets...). Listening to the various needs of customers, he decided to develop a range of safety cabinets for dangerous products and also offers custom-made equipment. This permanent relationship between customer expectations and Cyltec's capacity for innovation is our DNA. In 2018, Christophe Huvelin discovered the quality of Cyltec's products when he took over the company. Today, Louis Launay is working with him to ensure the transmission of over 30 years of expertise and to continue to develop this range of safety cabinets for hazardous products. 2021 announces the launch of more than 70 new references.

Christophe Huvelin and Louis Launay

OUR VALUES

The administrative team

THE 3 CORNERSTONES OF OUR VALUES ARE:

1 The quality of our products, our relationship with our customers and partners:

All the products we design are controlled in our factory. We are committed to manufacturing sustainable products to satisfy our customers and limit our environmental footprint. We are also committed to a quality policy to improve our processes. All our partners have been faithful to us for more than 10 years and this collaboration over time guarantees the quality of our products and services.

2 Honouring our commitments:

The loyalty and trust of our customers have built Cyltec's notoriety and brand image for over 30 years. All our certifications are granted by external and independent organisations.

3 Actions for our internal and external environment:

Cyltec's policy is to be socially and environmentally responsible. Training, safety and staff development are a management priority. Our ecological footprint is also part of this environmental approach: for example, all the factory waste is collected, recycled and tracked by our partner Solution Recyclage.

The logistic and technical team
